About the Course:

The ATAL FDP are to support technical institutions in fostering research innovation and entrepreneurship through training. To provide a variety of opportunities for training, and exchange of experiences such as workshops, orientations, learning communities, peer mentoring and other FDPs.

Moodle supports a range of media to present or link to learning materials and supports the learners to assess their learning. Virtual Practical Laboratory (VPL) is very useful in practicing Computer Programming Languages and Workshops for communicating and collaborating with peers. Using the course forums, learners can discuss topics, share ideas and even feedback on each other's work.

Target Group:

Faculty members from various higher education institutions with different disciplines like arts, science, humanities, technology, etc.

This FDP is basically designed to provide assistance in developing MOODLE based Learning Management Systems. By the end of the course, participants can create courses, schedule activities as per their lesson plan, conduct assignments and online tests, automatic check for plagiarism in the submitted assignments, mark attendance, share learning materials with students, generate results and reports of various activities and many other things related to academics.
